To the reader

This codebook is part of the data FSD1203 archived at the FSD (Finnish Social Science Data Archive). The dataset has been described in as much detail as possible in Finnish and English. Variable frequencies, variable and value labels, and missing values have been checked. If necessary, the data have been anonymised. The data and its creators shall be cited in all publications and presentations for which the data have been used. The bibliographic citation may be in the form suggested by the archive or in the form required by the publication. The bibliographic citation suggested by the archive:

Paasikallio, Martti (Efektia) & Miettinen, Heikki (Efektia) & Varhe, Seppo (Efektia): City Service Survey 1993 [dataset]. Version 2.0 (2018-09-07). Finnish Social Science Data Archive [distributor]. <http://urn.fi/urn:nbn:fi:fsd:T-FSD1203>

The user shall notify the archive of all publications where she or he has used the data. The original data creators and the archive bear no responsibility for any results or interpretations arising from the reuse of the data.

The codebook contains information on data content, structure and data collection, and includes a list of publications wholly or in part based on the data, according to publication information received by the FSD. The second part of the codebook contains information on variables: question texts, response options, and frequencies. The third part contains indexes.

Variable distributions presented in this codebook have been generated from the SPSS files. Distribution tables present variable values, frequencies (n), frequency percentages (%), and valid percentages (v. %) which take into account missing data. All distributions are unweighted. If the data contain weight variables, these will be found at the end of the variables list. In some cases frequency distributions have been substituted by descriptive statistics. Categorised responses to open-ended questions are not always included in the codebook. Distributions may contain missing data. The note "System missing (SYSMIS)" refers to missing observations (e.g. a respondent has not answered all questions) whereas "Missing (User missing)" refers to data the user has defined as missing. For example, the user may decide to code answer alternatives 'don't want to say' or 'can't say' as missing data.

The codebook may contain attached files, the most common one being the questionnaire.

City Service Surveys

City services have been studied since 1983. The surveys, conducted by the Association of Finnish Cities, and since 1993 by Efektia and Efeko (nowadays FCG Finnish Consulting Group), canvass citizens' attitudes towards municipal services and administration. The datasets are to a large extent comparable.

Abstract

City service survey 1993 canvassed citizens' views on the present state of city government and public services, and how these could be developed. Questions revolved round residential areas and living conditions, day care services, public child welfare clinics, elementary and secondary schools, health care services, care of the elderly, cultural and recreational services, local finance, influence in municipal decision-making, and flow of public information. The respondents evaluated, for example, the necessity of certain services. They were also asked to describe their everyday life and assess their willingness to migrate. Background variables included respondent's age, sex, marital status, education, number of children, professional status, location of work place, and the modes of transportation used for commuting.

1.3 Structure and collection of the data

Country: Finland

Geographic coverage: Finland, Espoo, Forssa, Helsinki, Hämeenlinna, Imatra, Järvenpää, Kemi, Kerava, Kokkola, Kotka, Kuusankoski, Lappeenranta, Maarianhamina, Mikkeli, Naantali, Raisio, Suolahti, Tammisaari, Tampere, Tornio, Vaasa

Analysis or observation unit type: Individual

Universe: People aged 18-70 living in any of the participating towns/cities

Collection date: 1993

Data collector(s): Efektia

Mode of data collection: Self-administered questionnaire: Paper

Type of research instrument: Structured questionnaire

Time period covered: 1993

Time method of the data collection: Longitudinal: Trend/Repeated cross-section

Response rate: 63.7%

Number of variables and cases: The data contain 208 variables and 11022 cases.

Sampling procedure: Probability: Simple random

The size of the sample varied according to the number of inhabitants in the town/city. In each participating town respondents were randomly selected. Efektia invited all Finnish towns to participate in the survey and the participating towns volunteered.

1.4 Use of data

Data appraisal

To prevent identification, values of 3 and over in variable q6 (number of children) were top-coded.
