To the reader

This codebook is part of the data FSD2117 archived at the FSD (Finnish Social Science Data Archive). The dataset has been described in as much detail as possible in Finnish and English. Variable frequencies, variable and value labels, and missing values have been checked. If necessary, the data have been anonymised. The data and its creators shall be cited in all publications and presentations for which the data have been used. The bibliographic citation may be in the form suggested by the archive or in the form required by the publication. The bibliographic citation suggested by the archive:

Pajala, Antti (University of Turku) & Jakulin, Aleks (Jozef Stefan Institute): Plenary Votes in the Finnish Parliament during 1983-2014 [dataset]. Version 3.0 (2017-03-24). Finnish Social Science Data Archive [distributor]. <http://urn.fi/urn:nbn:fi:fsd:T-FSD2117>

The user shall notify the archive of all publications where she or he has used the data. The original data creators and the archive bear no responsibility for any results or interpretations arising from the reuse of the data.

The codebook contains information on data content, structure and data collection, and includes a list of publications wholly or in part based on the data, according to publication information received by the FSD. The second part of the codebook contains information on variables: question texts, response options, and frequencies. The third part contains indexes.

Variable distributions presented in this codebook have been generated from the SPSS files. Distribution tables present variable values, frequencies (n), frequency percentages (%), and valid percentages (v. %) which take into account missing data. All distributions are unweighted. If the data contain weight variables, these will be found at the end of the variables list. In some cases frequency distributions have been substituted by descriptive statistics. Categorised responses to open-ended questions are not always included in the codebook. Distributions may contain missing data. The note "System missing (SYSMIS)" refers to missing observations (e.g. a respondent has not answered all questions) whereas "Missing (User missing)" refers to data the user has defined as missing. For example, the user may decide to code answer alternatives 'don't want to say' or 'can't say' as missing data.

The codebook may contain attached files, the most common one being the questionnaire.

Abstract

The survey charts plenary votes in the Finnish Parliament between 1983 and 2014. Each vote contains the votes of the MPs and the number of nay and yea votes, blank votes and absents. The data comprises the number of the vote in the plenary session, and time, type, title, status, and background information of the vote. The number, date and starting time of the plenary session is also included.

1.3 Structure and collection of the data

Country: Finland

Geographic coverage: Finland

Analysis or observation unit type: Event/Process

Universe: Plenary Votes in the Finnish Parliament during 1983-2014

Collection date: spring 2004 – summer 2015

Data collector(s): Pajala, Antti (University of Turku. Department of Political Science); Jakulin, Aleks (Jozef Stefan Institute); Pulkkinen, Niina; Makkonen, Kimmo

Data producer(s): Academy of Finland; University of Turku. Department of Political Science

Time period covered: 1983 – 2014

Time method of the data collection: Time series

Number of variables and cases: The data contain 870 variables and 25438 cases.

Sampling procedure: Total universe/Complete enumeration

Data sources: Website of the Finnish Parliament and microfilms of vote charts in the Library and Archive of Parliament.

1.4 Use of data

Data appraisal

In the variable bv2 "number of vote in plenary session" values 1900, 2000 ja 2600 refer to ballots. When two zeros are removed from the values, they denote the tie vote. The variable bv3 "time of vote" contains information since 1996.

Appendix A

Additional information on the data

A.1 Additional information on the coding of variables

BV1 Result of vote (the 2/3 majority rule not taken into account)

The majority is calculated from the votes casted (not necessarily from all 199). The data do not indicate whether (in some rare cases) a 2/3 majority was required.

BV2 Number of vote in the plenary session

The vote numbering adheres to the customs of Finnish Parliament. It follows a 24-hour (00:00–24:00) period, i.e. a calendar day. Thus, the numbering can continue from one session to another, provided that the sessions take place during the same calendar day. However, during a nightly session, it is possible that the numbering starts again from one, if a vote is taken on the next calendar day (i.e. after midnight). Every following vote in further sessions during the same calendar day follow the numbering started during the night.

BV3 Time of vote

This variable is provided for 1996 onwards. For the earlier years this information is not available.

BV4 Number of plenary session in Parliament

Starts from one and ends to the last session, which in some cases takes place in the next calendar year.

BV12 Subject of vote

In most cases, this variable also indicates the MP who proposed the vote.

BV13 Title of proposal/motion

In some cases the title is preceded by a number, which indicates the item number of the proposal/motion in the session agenda (e.g. if the number is '1', it is the first item on the agenda).

BV15 Status/reading of proposal/motion

Afer 1st March 2000 as the new Finnish constitution came into force, the final reading of a law became the second reading, as the former first and second readings were merged. Thus, before 1st March 2000, the final reading is the third reading.

BV16 Background information for proposal/motion

Includes abbreviations/codes, which are explained below. The first abbreviation indicates the type of vote. The four subsequent character abbreviation (if any) XxVM indicates the parliamentary committee which processed the cabinet proposal, and the following number is the number of the report (e.g. StVM 2 = Social and Health Committee report number 2). This report is the basic document that the plenary session processes on its agenda. Explanations to all the abbreviations can also be found on the web pages of Finnish parliament <URL:<http://web.eduskunta.fi/Resource.phx/p>
